

**HBI 22**

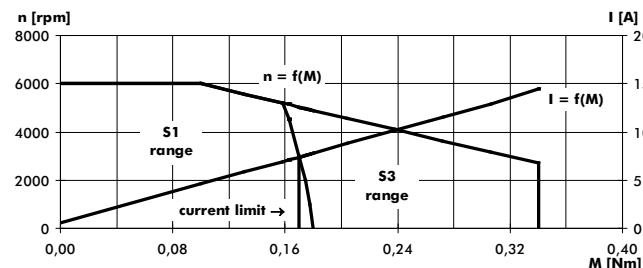

Motor type	Dimension	
	L1	L2
HBI 2230	125	15
HBI 2230-B7.01	157	17
HBI 2260	155	15
HBI 2260-B7.01	187	17

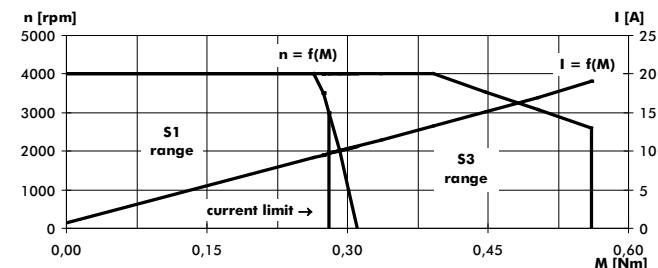

**Operation characteristics:**

Measured at 24VDC

HBI 2230, 24V, 3000/6000rpm

HBI 2260, 24V, 3000/4000rpm

**Description:**

Brushless Three-phase Synchronous Drives with powerful concentrated winding motor systems and integrated electronics for operation at selective 24VDC or 48VDC.

With their powerful and pleasing „motor only“ design these compact drives are well suited for peripheral application in single or multi axes systems.

The HBI's are operated either by analogue/digital signals or via the CAN interface that supports CANopen as a standard and DeviceNet as an option.

The CANopen interface provides profile torque mode, profile velocity mode and profile position mode as well with either linear or jerk free velocity ramps.

The profile position mode supports absolute and relative demands. Homing is done onto limit switches, mechanical stop or at the current position.

The rotor position is evaluated through a linear hall sensor system. The sinusoidal motor current feed leads to smooth and constant torque development.

A rotatable angled connector feeds both power supply and signals to the HBI. Executions supporting CAN and incremental signals are equipped with an additional M12 connector.

The drives configuration is done via RS232 and a clear and simple to use PC-Software „DserV“.

**Features:**

- Peripheral operation, less effort to install
- Stand alone operation with analogue speed setpoint
- Compact and powerful
- Positioning capability
- Protection class IP54 (IP65 as an option)

**Options:**

- DeviceNet
- 1-/2-stage planetary gear
- Parking brake
- Customized executions
